

Importing the example code

1. Click the green “Code” button on top right corner.

2. Click “Download Zip”. Or use git clone if you prefer and skip to step 5.
3. Open and unzip the downloaded zip package to a path that you can find later.
4. Open the directory where you unzipped the example codes.
5. Open the example *Wappu_led_strip_example.ino* by double clicking it.
 - a. If double click opening does not work open the arduino ide.
 - b. Click “File” from top left corner

- c. Click “Open” and navigate to the path where you unzipped the example codes.
6. Follow the same instructions than when setting up the IDE to configure the right settings for the Arduino board we are using to load this code to your microcontroller.
